- **Workshops** – Session for the “up-and-coming” technology like AI/Robotics.
- **Technical Site Visit** - An off-site visit to NL industry partner highlighting/ innovation and leading edge technology adaptation at work.
- **Networking** – Social events to bring the attendees together to network outside the conference sessions.

MISSION:

For decades CCFI and MI have been industry leaders in the development and adoption of innovation and strategic collaboration between academia, fish and seafood industry technology and industrial supply companies both nationally and internationally. The Innovation Summit will provide a new collaborative platform for learning and exchanging ideas through a unique assortment of sessional topics that are targeted to key opportunities and challenges facing the industry. The summit will be available and of interest to multiple industry stakeholders across Atlantic Canada that will support industry leaders and innovators that are vital to the continued prosperity of the Atlantic Canadian seafood community.

The event will focus on exposing additional opportunities for industry modernization through leveraging innovation and the adoption of new technologies that support the long-term sustainability of Atlantic Canada’s seafood sector. The intent is to gather innovation technology leaders with industry and academia in an event that includes industrial demonstrations, workshops, technical site visits and networking opportunities.
